Data Storage and Business Continuity Solutions from VLCM

Storage solutions are hardly a cookie-cutter business. In IT, data is your business. When it comes to backing up your data, simplicity and efficiency are necessary for smoothly running your organization.

Today's data-intensive environments require storage that is scalable, secure, and designed to meet your business objectives for a high-performing, yet cost-effective solution. Whether you are looking for easy accessibility to the cloud or you are looking to ramp up your performance, our expert engineers can create the ideal solution that will fit your organization's needs.

Enterprise Data Storage

In 2006, Clive Humbly stated that "data is the new oil." He elaborated by saying that, like oil, data is "valuable, but if unrefined it cannot really be used." In other words, understanding your data and how it can be used is fundamental to utilizing the value of this powerful business resource. Today's modern enterprise data storage systems are built to do just that – harnessing the power of AI and built for the cloud, a modern, intelligent storage solution can help you unlock the full potential of your data.

Modern storage infrastructure should allow data to be accessible and sharable while offering high performance, high availability, security, scalability, and a low total cost of ownership per gigabyte. If your current storage infrastructure doesn't meet your unique needs, then it may be time to take your future into your own hands with the help of VLCM.

Business Continuity

When it comes to backup and disaster recovery in today's society, disasters occur that extend beyond simple hardware failures. Businesses cannot afford to shut down in response to man-made incidents, natural disasters, or pandemics. Contingency planning is essential to ensure business continuity. Do you have a comprehensive contingency and disaster recovery plan to keep your business responsive during a crisis?

Regardless of whether it is an earthquake or a world-wide pandemic, VLCM understands the need for a comprehensive business continuity plan that will ensure your business remains operational despite unforeseen events. VLCM will help you realize new levels of business and IT efficiency by identifying, developing, and deploying customized backup and recovery solutions that address your organization's specific needs.

Why VLCM for Your Modern Storage Needs?

At VLCM, our relationship with you is critical: Our one and only goal is to ensure the success of your business, no matter the solution or product that will best fit your needs.

With more than 40 years of experience, we have helped thousands of customers throughout the Rocky Mountain West find the proper solutions for their IT issues. Our success has come by adapting our expertise and experience amid the ever-changing world of information technology while building strong relationships with our clients based on trust first and foremost.
